

Create Studio-Quality Professional Headshots with AI

What you need:

- 3 clear phone photos: front view, left side view, right side view
- An AI image generator (e.g. ChatGPT)
- Your preferred professional style

Step 1 - Take three clear photos

Use even natural light, face a window, neutral expression, no hats or sunglasses. Capture front, left side and right side views.

Step 2 - Upload your photos

Start a new conversation in your AI image generator and upload all three photos together so it has full reference of your facial structure.

Step 3 - Copy and use the prompt

Using the three uploaded reference photos of me (front view, left side view, and right side view), create a studio-quality professional headshot.

Requirements: maintain accurate facial features, skin tone, hair and age; professional photography quality with soft studio lighting; clean neutral background; professional business attire; natural confident expression; sharp focus on the face; 4:5 aspect ratio; high resolution. Do not alter my facial structure, features or proportions.

Step 4 - Review before you publish

Compare against your reference photos. Facial features, skin tone, hair and age must read accurately. Regenerate if anything looks artificial, then download at full resolution.
